

# **DATASHEET**

## ITR8102

#### **Features**

- Fast response time
- High analytic
- High sensitivity
- Pb free
- This product itself will remain within RoHS compliant version

## **Description**

The ITR8102 consist of an infrared emitting diode and an NPN silicon phototransistor, encased side-by-side on converging optical axis in a black

thermoplastic housing The phototransistor receives radiation from the IR only .This is the normal situation. But when an object is in between, phototransistor could not receive the radiation.

### **Applications**

- Mouse Copier
- Switch Scanner
- Floppy disk driver
- Non-contact Switching
- For Direct Board

## **Device Selection Guide**

| Device No. | Chip Material | LENS COLOR  |  |  |
|------------|---------------|-------------|--|--|
| IR         | IR GaAlAs     |             |  |  |
| PT         | Silicon       | Water Clear |  |  |

## **Absolute Maximum Ratings (Ta=25)**

| Parameter                                                           |                                                                | Symbol             | Ratings | Unit |
|---------------------------------------------------------------------|----------------------------------------------------------------|--------------------|---------|------|
| Input                                                               | Power Dissipation at(or below) 25 Free Air Temperature         | Pd                 | 75      | mW   |
|                                                                     | Reverse Voltage                                                | $V_R$              | 5       | V    |
|                                                                     | Forward Current                                                | $I_{\mathrm{F}}$   | 50      | mA   |
|                                                                     | Peak Forward Current (*1) Pulse width 100 \mu s, Duty cycle=1% | ${ m I_{FP}}$      | 1       | A    |
